ICT enabled Innovative Delivery of Services for Stroke Patients

The [ECHAlliance Thematic Innovation Ecosystem](#) on Digital Health and Wellbeing is a forum for the sharing of good practices, exchanging ideas and gaining new knowledge.

The third European Connected Health Alliance (ECHAlliance) Thematic Innovation Ecosystem (TIE) on Digital Health and Wellbeing will be held virtually on 7 April 2022, when we will hear about innovation in the delivery of Stroke services in Moldova and in Scotland.

The treatment and care of people who experience a Stroke are core elements of service delivery across healthcare systems. The incidence of stroke continues to feature as a significant cause of disability and death. The disruption caused by the impact of COVID-19 across healthcare has also highlighted the importance of improving innovation and collaboration in the provision digitally enabled Stroke services.

In this session the presentation and discussion will feature presentations from Moldova and Scotland, about:

- The Stroke service in Moldova.
- How innovation and collaboration is transforming stroke care.
- The National Project: Organisation of Emergency Care Service for Stroke Patients by Implementing Telemedicine in the Republic of Moldova. And building a brighter future for stroke patients.
- Current Stroke service provision in Scotland
- Innovation examples: the use of [Tailored Talks](#) and the use of Microsoft Teams to communicate along the stroke pathway.
- The Scottish Stroke Improvement Programme.
- Using technology to support rehabilitation.

To register for the webinar please use the following link:
